

## Marking symbols

### In brief...

- Marking symbols are used to indicate the entry point of house connections on the building's wall.

**Versions with anchoring pin :**

**Plain or bicoloured**, injection-moulded, they are available in the following colours : yellow, blue, green, orange. They are fitted out with an injection-moulded anchoring pin for 6 mm diameter holes. Just drill a hole and push the marking symbol with anchoring pin into it : **no screw or plug is required** to get a sure fastening.

**Versions without pin :**

**Without hole (for gluing) :** Plain or bicoloured injection-moulded.

**With hole for screw :** Plain injection-moulded, with hole for a 3,5 mm diameter countersunk screw.

for gas

for water

Available in the following colours : yellow, blue, green, orange. Other colours and inscriptions available on request.

for sewer

for district heating

**Material :**

The marking symbols are made of plastic (Luran-S) – extremely weather and shock resistant. Thanks to their entirely non-reflecting matt surface they remain legible even at a distance.

**Careful ! Do not use** any adhesive containing solvent but rather silicone.
