

Signposts and fastening elements for identification plates

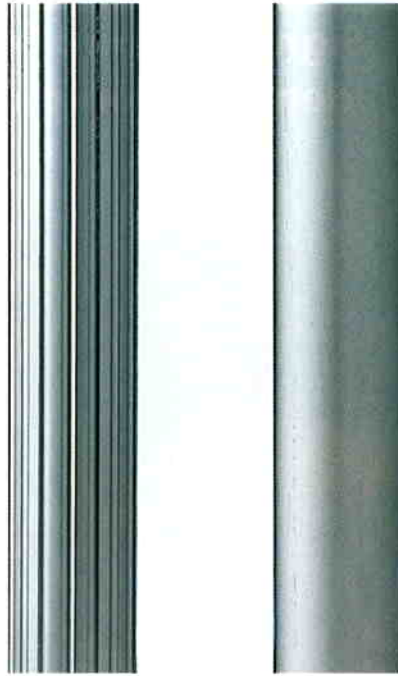

In brief...

- For wall or post installation : SGM fastening plates, clamps and posts constitute a simple system.
- All parts are made of anodised aluminium. The special coating (Eloxal) protects the aluminium against corrosion and prevents it from tarnishing.
- Only **one** tool is required to fit all parts (see following photo).
- SGM stainless steel (V2A) hexagonal socket head screws prevent the identification plate from being removed by unauthorized people (no nuts required).
- The SGM system offers you a convincing blend of design and function in many colour options.

Signposts

SGM signposts are available in 2 models : smooth (type SPG) or profiled (type SPP) in 50 mm or 60 mm diameters with the following standard lengths : 1,5 m; 2 m; 2,5 m; 3 m (other lengths on request).

All signposts are delivered with plastic caps and aluminium stay bolts.

To prevent alkaline reactions with liquid cement and ensuing corrosion, all posts are supplied with a 80 cm long plastic coating.

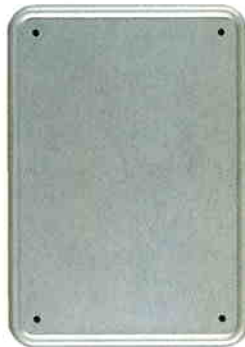

Bottom section showing stay bolts

Notice : Other colours for signposts, fastening clamps and fastening plates on request (plastic-coated).

Fastening plates for post or wall installation

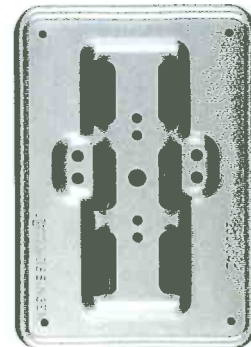

Type SGG :

Plain model : for wall and fence mountings.

Type SGB :

Version for mounting on posts with fastening clamps or steel straps.

Recessed mounting protects your identification plate

All SGM fastening plates are made of 2 mm thick aluminium. Their flanged profile ensures an all-round snugly-recessed fit for the identification plate, helping protect it against damage and giving additional stability.

SGM fastening plates can also be used for identification plates made by other manufacturers.

Fastening plate sizes

All below-mentioned sizes are available in type SGG (smooth version for wall and fence mountings) and in type SGB (with steel straps for post mountings).

140 x 100 mm

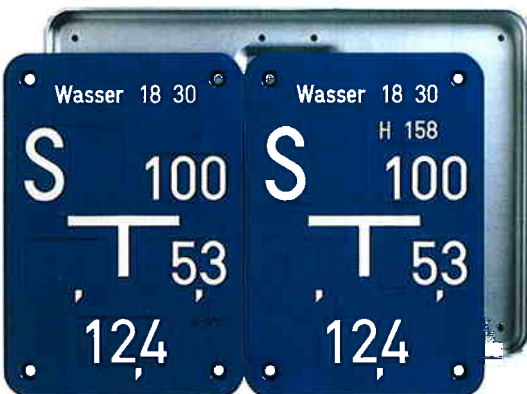

140 x 200 mm

200 x 140 mm

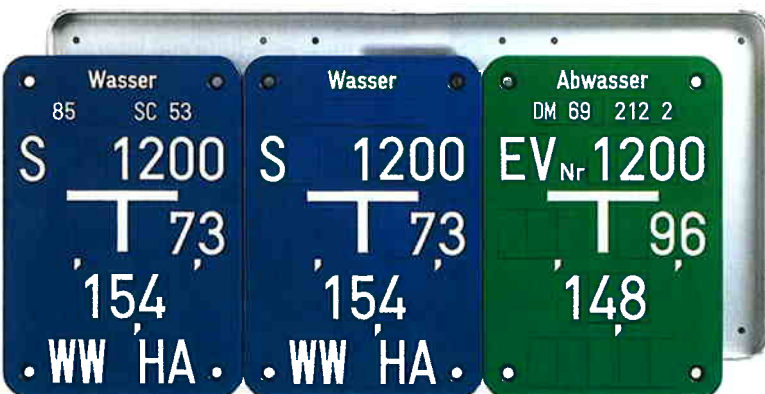

200 x 250 mm

200 x 280 mm

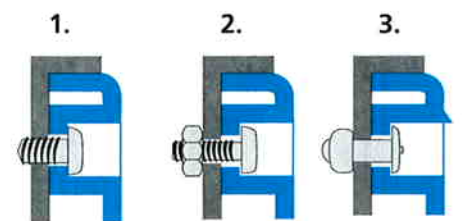

200 x 390 mm

200 x 420 mm

3 options for fitting the sign to the fastening plate

1. Self cutting hollow hexagonal tapping screws (no nuts required).
2. Hollow hexagonal screws with nuts.
3. Blind rivets.

Profiled fastening clamps for SGM profiled posts

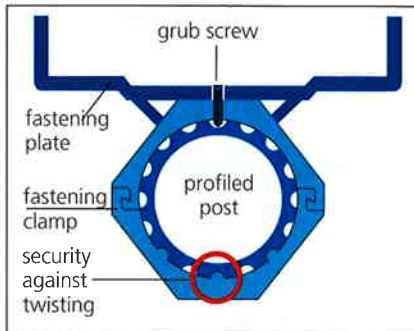

Fastening clamps for mounting on profiled posts :

Made of 2 interlocking parts. The easy and quick fixing of the fastening plate and clamp on the post occurs by means of only one grub screw.

Type BSP 50 : for 50 mm diameter posts.

Type BSP 60 : for 60 mm diameter posts.

The contour of the clamp perfectly fitting the contour of the post prevents the identification plate from twisting.

Thanks to the 16 grooves of the post, the plate may be fixed in 16 different positions. Adjustments during the cementing-in process are thus unnecessary.

Smooth fastening clamps suitable for all types of smooth posts

Fastening clamps for mounting on smooth posts :

Same model as above but without profile. The clamps can also be used on other 50 or 60 mm diameter posts (e.g. on galvanized steel traffic posts).

Type BSG 50 : for 50 mm diameter posts.

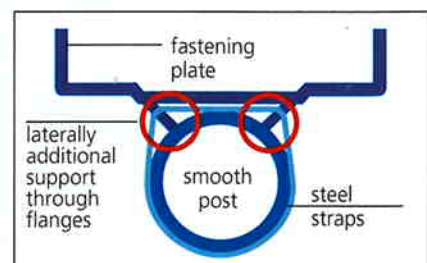

Type BSG 60 : for 60 mm diameter posts.

Mounting of fastening plates by means of steel straps

The SGM fastening plates can also be attached to posts by means of steel straps.

The plate's punched-out flanges serve here as additional lateral support. (see drawing below)

Steel bands, fasteners and tightening tool : see price list.
